

KPIs

1. Number of Completed Jobs per time interval (per day, week, month, etc)
2. Number of Failed Jobs per time interval (per day, week, month, etc)
3. Number of components picked (Total per day per zone)?
4. Pick Job completion time per time interval
5. Compare number of picks between zones
6. Compare pick times between zones
7. Average pick time per time interval (Pick Rate)
8. Most common parts picked – Part based
9. Most frequently picked parts – Time based
10. Busiest pick zone / Slowest pick zone
11. Job-In-Queue time
12. Reacted time per zone (Added In KPI 4)
13. Error rate per zone (Added In KPI 5)
14. Ended time per zone (Added In KPI 6)
15. Number of Jobs and Time per Shift (Added In KPI 6)

KPI 11

General Job-In-Queue Time

- Reaction time
- Pick time

KPI 9

Compare number of parts (Time based)

KPI 10

Busiest zones - Compare number of parts (Zone based)

KPI 9: Requested and Picked Definition

Requested Parts

Picked Parts

Dashboard: Most Frequently Requested Parts and Picked Parts (KPI 9)

KPI 9: Most Frequently Picked Parts - Time Based

In general, May and June have the lowest pick rate, which matches our previous analysis on completion rate.

Is Picked

No
Yes

KPI 10: Busiest pick zone - pick rate

Pick Rate:

Predictive Analysis

Fit binary classification on *completion or failure* of Pickjob

Fit classification on *completion time* of Pickjob

Attributes Overview

| Attributes | Description | Note |
|----------------------------|---|--|
| Number of Different Parts | How many different parts are in one job. | Defined different parts with 'description' in part table |
| Number of Different Orders | How many different orders are in on jobs | Calculated by counting order id. |
| Quantity | Total number of parts. | Different from Number of Different Parts. Quantity counts the number of same parts too. |
| Non-trackable Parts | If the job contains non-trackable parts or not. | Binary: 0 'doesn't contain non-trackable parts'; 1 'contains at least one non-trackable parts' |
| Pick-zone-location-id | The zone the job belongs to | one-hot encoded: 14, 15, ..., 400, 402, 404, 406 (23 locations) |
| Area | The area the job belongs to | one-hot encoded: 'Trim and Foam', 'Head Rest', 'Alpha' |
| Shift | The shift time when the job is in queue | one-hot encoded: 'Morning', 'Afternoon', 'Night' |

Correlation

Imbalanced Dataset

Predictive Analysis Pipeline

1st

Data Preprocessing

Columns with continuous values are standardized with z-score normalization. Test dataset is scaled according to mean/std of training dataset

2nd

Deal with imbalanced dataset

Since the ratio of completed jobs and failed jobs is 9:1, undersampling without replacement was used to balance the training dataset

3rd

Grid search + CV

- To find the optimal and robust model, grid search on hyperparameters with 5-fold cross validation was used
- Due to data imbalance, model with the highest F-1 was chosen

4th

Interpret Results

Performed coefficient analysis on Logistic Regression and feature importance analysis on Random Forest, Decision Tree
